

QRCode.js

QRCode.js is javascript library for making QRCode. QRCode.js supports Cross-browser with HTML5 Canvas and table tag in DOM. QRCode.js has no dependencies.

Basic Usages

```
<div id="qrcode"></div>
<script type="text/javascript">
new QRCode(document.getElementById("qrcode"), "http://jindo.dev.naver.com/collie");
</script>
```

or with some options

```
var qrcode = new QRCode("test", {
  text: "http://jindo.dev.naver.com/collie",
  width: 128,
  height: 128,
  colorDark : "#000000",
  colorLight : "#ffffff",
  correctLevel : QRCode.CorrectLevel.H
});
```

and you can use some methods

```
qrcode.clear(); // clear the code.
qrcode.makeCode("http://naver.com"); // make another code.
```
